Tractor Arch

Assembly

When Unpacking Arch parts from Pallet, please have two people working, as parts may be cumbersome.

Assembly

- ✓ Remove all parts from pallet
- ✓ Place reach and drop tongue unit into arch unit receiver.
- ✓ Bolt into place tightly, as this is only done once (*photo lower left*)
- ✓ Mount winch and tighten well, if packaged separately, this is only done once.
- ✓ Release winch lever (black) and pull out enough line to reach back to the arch
- ✓ Be careful of spinning handle and slow down the pull every time you release line.
- ✓ Release the thumb screw on the block (pulley hanging on line) and mount it to the eyebolt below arch. Install the winch line through this block (*photo lower right*)
- ✓ If large block is packaged separately, refer to the owners manual for installation options for the block hanging. Install winch line as above.
- ✓ Install towing coupler if not already, tighten only once.
- ✓ Install tires and wheels, tighten.
- ✓ Lubricate winch cogs with grease, and OIL the input bushing where noted.
- ✓ Check all fasteners and familiarize yourself with the working of the winch, the doubling option choker bell and how to hook the choker.

Thank you for your patronage and please call with any questions or comments!
